

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	01/10/2026
Team ID	SWTID-2026-1051
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment for the team to generate multiple possible ways to address the selected Incident-management problem. The ideas below are project-specific and are grouped around automation, validation, usability and data integrity.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Team: Vishnu Raj, Lokeshwaran, Sandeep, Gowtham

Selected Problem Statement: Incident users need dynamic and controlled form behaviour so that required assignment information is enforced, Urgency is handled automatically for High Impact incidents, invalid submissions are blocked, and State changes through list editing are controlled.

Step-2: Brainstorm, Idea Listing and Grouping

Group	Idea	Purpose
Validation	Context-based mandatory validation for Assigned To	Ensure High Impact Incidents cannot be saved without assignment information.
Automation	Automatically set Urgency to High when Impact is High	Reduce manual entry and keep urgency consistent with Impact.
Form Control	Make Urgency read-only under the High Impact condition	Prevent unintended changes to automatically controlled data.
Reverse Behaviour	Reverse UI Policy actions when Impact is no longer High	Restore normal field behaviour when the condition becomes false.
Save Protection	Block submission when High Impact has no Assigned To	Protect Incident data integrity at save time.
List Protection	Prevent State changes through list editing	Require users to open the Incident before changing State.
User Guidance	Show clear messages explaining blocked actions	Help users understand validation and editing restrictions.
Testing	Use repeatable test activities	Verify mandatory enforcement, successful save, reverse condition and list-edit blocking.

Step-3: Idea Prioritization

Implement Client Script & UI Policy (Incident)

Ideas are considered using the two dimensions represented by the reference prioritization matrix: Importance and Feasibility.

Importance \ Feasibility	Low	Medium	High	Placement
High	—	User guidance	Mandatory validation / Urgency automation	High importance
Medium	—	Testing activities	Reverse UI behaviour / List protection	Medium importance
Low	—	—	Documentation improvements	Lower priority
Decision basis	Less suitable	Possible	Practical	Implementable within micro-project scope

Selected implementation concepts: High Impact UI Policy, Urgency automation, onSubmit validation, onCellEdit State protection, reverse-condition behaviour and repeatable testing.
