

Ideation Phase Empathize & Discover

Date	01/10/2026
Team ID	SWTID-2026-1051
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. For this project, the map represents a ServiceNow Incident user who needs to create, update and manage Incident records accurately.

The exercise focuses on the user's goals and challenges while working with Impact, Assignment group, Assigned To, Urgency, State and Incident submission behaviour.

Project Empathy Map — ServiceNow Incident User

	THINK & FEEL • Wants incidents to be entered correctly • Wants clear validation • Worries about incomplete records • Wants predictable field behaviour	
HEAR • Team/admin instructions • Incident handling rules • Feedback when required fields are missing • Guidance to open an Incident instead of list-editing State	SERVICE NOW INCIDENT USER Creates • Updates • Validates	SEE • Impact, Urgency and Assignment fields • Mandatory indicators • Validation messages • Incident list and form views
SAY & DO • Creates and updates Incidents • Assigns users/groups • Changes Impact when circumstances change • Uses form and list views		
		GOALS / GAIN • Save valid Incident records • Correct urgency automation • Clear form behaviour • Faster and more consistent Incident handling
PAIN		NEEDS

Implement Client Script & UI Policy (Incident)

• Missing required information • Incorrect field values • Unexpected save failures • Uncontrolled list editing		• Dynamic field rules • Automatic updates • Save validation • Controlled State editing
---	--	---

Project Context

The project uses a High Impact UI Policy together with onChange, onSubmit and onCellEdit Client Scripts. The combined behaviour makes Incident entry more consistent, automates urgency handling, prevents invalid submission and blocks direct State changes through list editing.
