

Project Design Phase

Proposed Solution Template

Date	01/10/2026
Team ID	SWTID-2026-1051
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Incident users need controlled, context-sensitive field behaviour. High Impact incidents must enforce assignment information, automate Urgency, prevent invalid submission, and prevent direct State changes through list editing.
2.	Idea / Solution description	Implement a ServiceNow Incident solution using one High Impact UI Policy and Client Scripts for onChange, onSubmit and onCellEdit events. The controls dynamically guide users and validate Incident updates.
3.	Novelty / Uniqueness	The solution combines declarative UI Policy behaviour with event-specific Client Scripts: automatic Urgency handling, save-time validation, reverse-condition behaviour and list-edit protection in one lightweight Incident workflow.
4.	Social Impact / Customer Satisfaction	Reduces avoidable data-entry errors, gives immediate feedback, makes Incident handling more predictable and supports cleaner Incident records for support teams.
5.	Business Model (Revenue Model)	This micro-project is an internal ServiceNow

		configuration solution rather than a standalone commercial product. If packaged as a service, value can be delivered through ServiceNow configuration, implementation and maintenance services.
6.	Scalability of the Solution	The rules are attached to the Incident table and can be reused across Incident records. Additional UI Policies and Client Scripts can be added for future requirements without introducing an external application stack.
