

Project Development Phase Model Performance Test

Date	01/10/2026
Team ID	SWTID-2026-1051
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	10 Marks

Model Performance Testing:

Project team shall fill the following information in model performance testing template. For this ServiceNow project, the performance review focuses on client-side rule responsiveness, data validation behaviour and record save/update behaviour. No fabricated timing or accuracy values are used because the project was tested manually rather than with an instrumented benchmark.

S.No.	Parameter	Values	Screenshot / Evidence
1	UI Policy Response	High Impact condition correctly makes Assignment group mandatory and Urgency read-only. Reverse-if-false restores normal behaviour.	Milestone 1, 2 and Activity 3 evidence
2	Client Script Response	onChange sets Urgency to 1 - High when Impact becomes High and displays an information message.	Milestone 3 / Activity 1 evidence
3	Submission Validation	onSubmit blocks save when Impact = High and Assigned To is empty; valid assignment allows save.	Milestone 4 / Activities 1 and 2
4	List Edit Protection	onCellEdit displays the configured alert and prevents State from being changed through list editing.	Milestone 5 / Activity 4
5	Record Save / Update	Valid Incident records save/update successfully after applicable requirements are satisfied.	Activity 2 and Activity 3

6	Client-side Processing	Scripts are event-driven and limited to the relevant Incident form/list events. Quantitative latency was not instrumented.	Manual development test; no numeric benchmark claimed

Performance Test Interpretation

The project is a lightweight ServiceNow configuration. The implemented scripts use direct g_form operations and a callback for list editing. The available project evidence demonstrates correct functional response; a precise millisecond response-time benchmark would require a dedicated browser/network performance tool and is therefore not reported as a measured value.
