

User Acceptance Testing (UAT) Template

Date	01/10/2026
Team ID	SWTID-2026-1051
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

Project Overview:

Project Name: Implement Client Script & UI Policy (Incident)

Project Description: A ServiceNow Incident micro-project that uses UI Policies and Client Scripts to enforce dynamic field behaviour, automate Urgency updates, validate Incident submission, reverse field restrictions when conditions change, and prevent State changes through list editing.

Project Version: 1.0

Testing Period: 01/10/2026

Testing Scope:

High Impact UI Policy; Urgency UI Policy Action; onChange Urgency automation; onSubmit Assigned To validation; Reverse if false behaviour; onCellEdit State list-edit blocking; successful Incident save/update.

Requirements tested: USN-1 through USN-8 as documented for the project.

Testing Environment:

URL/Location: ServiceNow developer instance — Incident [incident] form and Incident list.

Credentials: Authorized project/developer-instance credentials; credentials are not included in this document.

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	High Impact mandatory enforcement	1. Open Incident → Create New. 2. Set Impact = 1 - High. 3. Leave Assigned To empty. 4. Click Submit.	Incident is not saved and the Assigned To validation message is displayed.	Validation message was displayed and the Incident was prevented from saving.	PASS
TC-002	Successful High Impact save	1. Set Impact = 1 - High. 2. Populate Assigned To. 3. Verify Urgency = 1 - High. 4. Submit.	Incident saves successfully without the Assigned To validation error.	Incident INC0010005 was saved with Impact High, Urgency High and Assigned To populated.	PASS
TC-003	Reverse condition	1. Open a High Impact Incident. 2. Change Impact to 2 - Medium. 3. Verify field behaviour. 4. Update the Incident.	Assignment group is no longer mandatory and Urgency becomes editable.	High Impact restrictions were reversed and the Incident was updated after completing remaining required information.	PASS
TC-004	List edit State protection	1. Open Incident → All. 2. Double-click State. 3. Attempt to change the value.	Alert is displayed and the State value remains unchanged.	The alert was displayed and the list edit was blocked.	PASS
TC-005	Form-based Incident update	1. Open an existing Incident. 2. Change supported Incident fields through the form. 3. Complete required information. 4. Click Update.	The Incident updates successfully when validation conditions are satisfied.	Form-based update behaviour was verified as part of the project testing.	PASS

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	No confirmed defect recorded in the documented UAT activities.	Not applicable — no confirmed defect recorded.	N/A	Closed	All documented functional test activities passed.

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Test evidence should be retained with the project documentation.
- Bug tracking should include severity, status, and steps to reproduce when a defect is identified.
- Obtain sign-off from the responsible project reviewer before final submission.
