

Functional & Performance Testing Template

Model Performance Test

Date	01 October 2026
Team ID	_____
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	10 Marks

Test Scenarios & Results

Project-specific adaptation of the reference testing table.

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	High Impact UI Policy	Open Incident → set Impact to 1 - High → observe Assignment group and Urgency.	Assignment group becomes mandatory; Urgency becomes read-only.	Observed during Milestones 1–2; configured behaviour was active.	PASS
FT-02	Urgency automation	Change Impact to 1 - High.	Urgency becomes 1 - High and information message is displayed.	Observed in Activity 1; Urgency was automatically set to High.	PASS
FT-03	Invalid High Impact submission	Set Impact High → leave Assigned To empty → Submit.	Save is blocked and validation message is displayed.	Activity 1 showed 'Assigned To is mandatory for High impact incidents.'	PASS
FT-04	Successful High Impact save	Set Impact High → populate Assigned To → Submit.	Incident saves without Assigned To validation error.	Activity 2 saved INC0010005 with Beth Anglin assigned.	PASS
FT-05	Reverse condition	Change Impact from High to Medium → inspect fields → update.	High Impact restrictions reverse; Urgency becomes editable.	Activity 3 showed Medium Impact, non-mandatory assignment fields and editable Urgency.	PASS
FT-06	List State edit blocking	Incident → All → double-click State → attempt edit.	Alert appears and State remains unchanged.	Activity 4 showed the configured alert and blocked edit.	PASS
PT-01	Form event responsiveness	Trigger Impact change, submit validation and list edit during normal use.	Event handling should complete without script error or visible malfunction.	Manual functional evidence confirms correct event response; no numeric timing benchmark was recorded.	N/A
PT-02	Repeated rule execution	Repeat High Impact and list-edit tests on Incident records.	Rules should remain consistent across repeated user actions.	Functional test evidence was consistent; no load-test instrumentation was performed.	N/A

N/A indicates that the scenario was functionally exercised but no instrumented performance benchmark was collected.
