

Project Design Phase-II

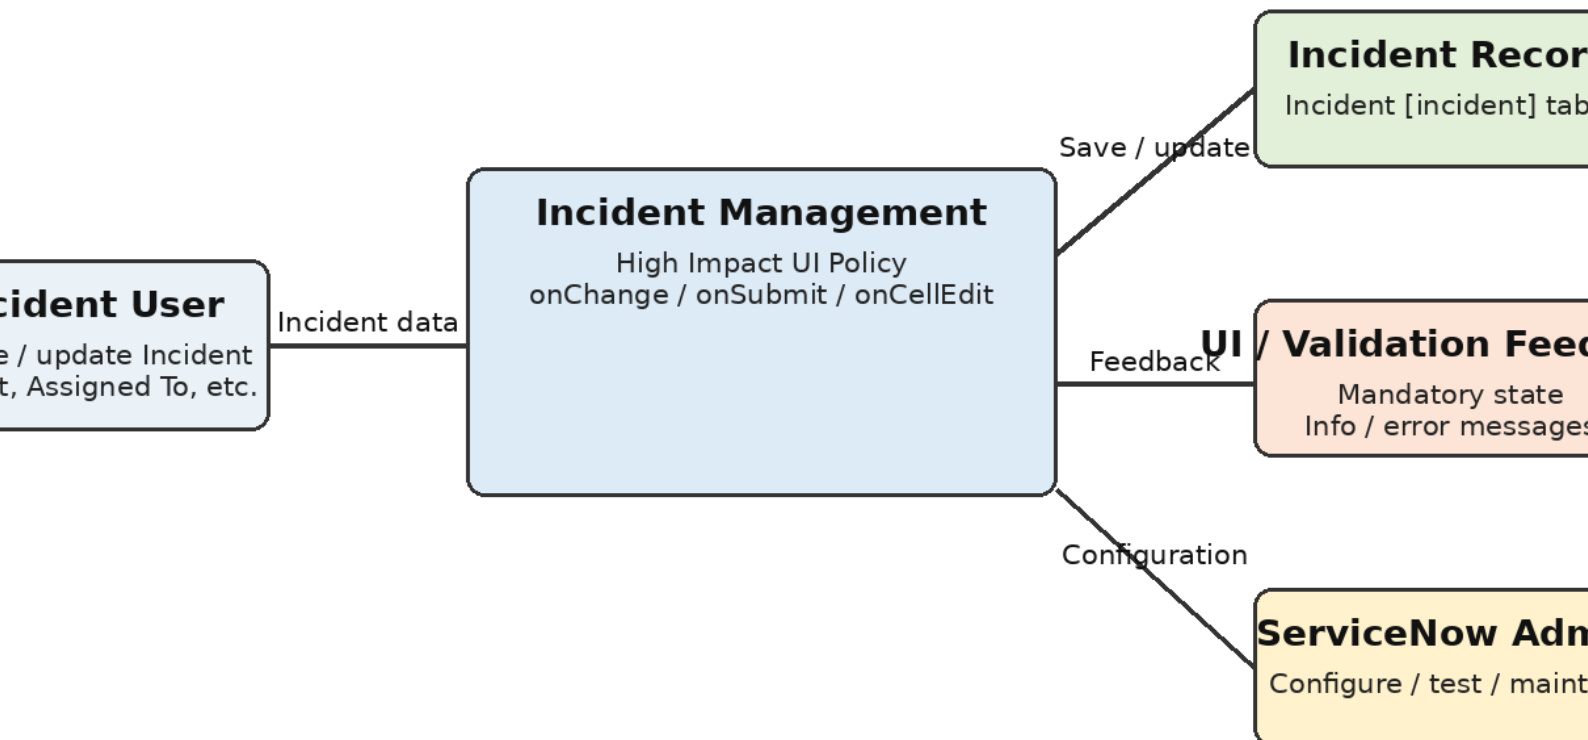

Data Flow Diagram & User Stories

Date	31 January 2025
Team ID	_____
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram is a visual representation of information flows within a system. This project DFD shows Incident data entering the form, passing through UI Policy and Client Script logic, reaching the Incident table, and returning validation feedback.

DFD LEVEL 0 — SERVICE NOW INCIDENT CONTROL

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Incident User	Incident Creation	USN-1	As an Incident user, I can create a new Incident and enter required Incident details.	Incident form accepts valid field values.	High	Sprint-1
Incident User	High Impact Control	USN-2	As an Incident user, when I select Impact = 1 - High, I can see the configured mandatory and read-only field behaviour.	Assignment group becomes mandatory and Urgency becomes read-only.	High	Sprint-1
Incident User	Urgency Automation	USN-3	As an Incident user, when I select High Impact, I want Urgency to be set automatically to High.	Urgency changes to 1 - High and the information message is displayed.	High	Sprint-1
Incident User	Save Validation	USN-4	As an Incident user, I cannot submit a High Impact Incident when Assigned To is empty.	Submission is blocked and the validation message is displayed.	High	Sprint-1
Incident User	Reverse Condition	USN-5	As an Incident user, when Impact changes from High to Medium, I want the High Impact restrictions to reverse.	Assignment group is no longer mandatory and Urgency becomes editable.	Medium	Sprint-1
Incident User	List Edit Protection	USN-6	As an Incident user, I cannot change State directly using list editing.	Alert is shown and the edit is blocked.	High	Sprint-1
Incident User	Incident Update	USN-7	As an Incident user, I can update a valid Incident when applicable requirements are satisfied.	Record is updated without the High Impact validation error.	Medium	Sprint-1
Administrator	Configuration	USN-8	As a ServiceNow administrator, I can maintain the UI Policy and Client Scripts used for Incident control.	Configuration records are active, scoped to Incident and testable.	Medium	Sprint-2

User Story Traceability

Story	Requirement	Implementation	Expected outcome
USN-1	Incident creation	Incident form	Create valid record
USN-2	High Impact control	High Impact UI Policy	Mandatory Assignment group + read-only Urgency
USN-3	Urgency automation	onChange Client Script	Set Urgency = High
USN-4	Save validation	onSubmit Client Script	Block save when Assigned To is empty
USN-5	Reverse condition	UI Policy Reverse if false	Restore normal behaviour
USN-6	List edit protection	onCellEdit Client Script	Block State list editing
USN-7	Incident update	UI Policy + Client Scripts	Allow valid update
USN-8	Administration	ServiceNow configuration	Maintain and test rules

Data Entities / Stores

Primary data store: ServiceNow Incident [incident] table. User and assignment information is referenced through ServiceNow fields. No external database or external API is required in this project scope.
