

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	31 January 2025
Team ID	_____
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Technical Architecture:

The deliverable includes the architectural diagram and information represented in Table-1 and Table-2.

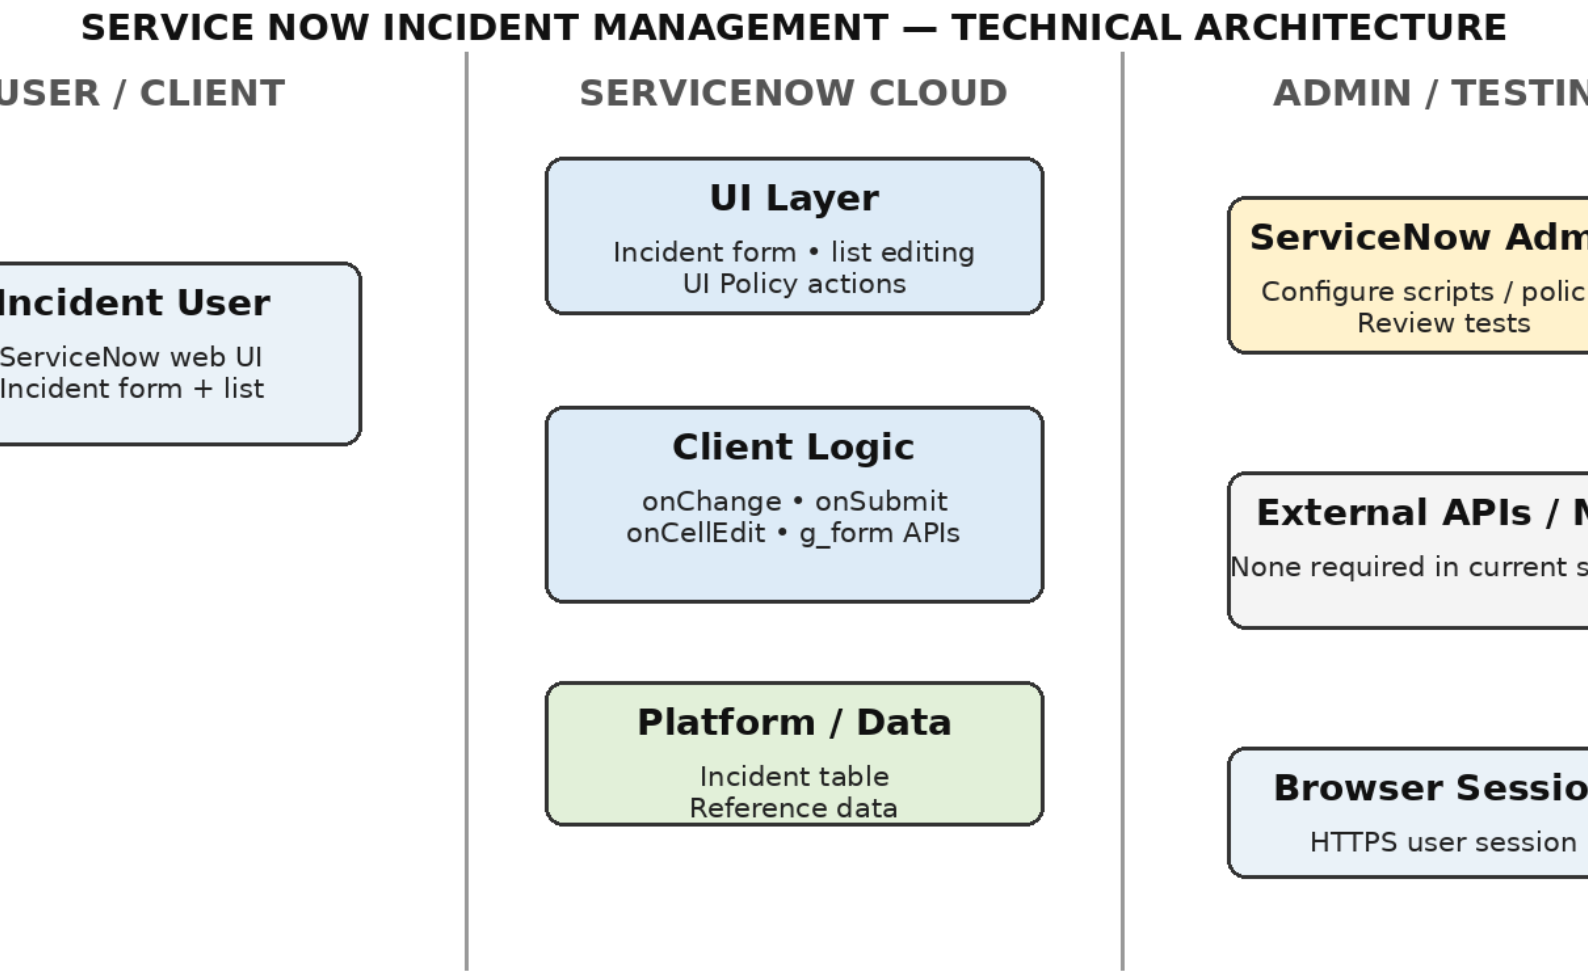

Table-1 : Components & Technologies

S.No	Component	Description	Technology
1	User Interface	Incident form and Incident list.	ServiceNow web UI / browser
2	Application Logic-1	Dynamic field behaviour based on Impact.	UI Policy — High Impact Control
3	Application Logic-2	Automatic Urgency update when Impact changes.	Client Script — onChange
4	Application Logic-3	Validate Incident submission.	Client Script — onSubmit
5	Application Logic-4	Block State changes through list editing.	Client Script — onCellEdit
6	Database	Stores Incident records and field values.	ServiceNow Incident [incident] table
7	Reference Data	User and assignment information.	ServiceNow user/group reference data
8	External API	Not required in project scope.	Not applicable
9	Machine Learning Model	Not required for rule-based Incident controls.	Not applicable
10	Infrastructure	Application and configuration hosted in the instance.	ServiceNow Cloud / Browser

Table-2: Application Characteristics

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	No additional open-source application framework is required.	ServiceNow platform scripting
2	Security Implementations	ServiceNow roles/ACLs plus client-side UI controls.	ServiceNow ACLs / roles
3	Scalable Architecture	Table-level rules execute only for relevant Incident events.	ServiceNow platform
4	Availability	Depends on ServiceNow instance and browser/network session.	ServiceNow Cloud
5	Performance	Small event-driven scripts limited to relevant fields/events.	Client-side JavaScript / ServiceNow APIs
